3. Action Plan

Phased Roadmap

4. Data Sources & Methodology

1. Executive Summary

This report presents a comprehensive SEO audit of **flavory.wine** for a **D2C e-commerce (WooCommerce): wine tasting game boxes, B2B gifts, on-location tastings; nl-NL primary with partial /de/ section** site, generated on September 16, 2026. Findings combine technical, content, schema, performance, visual, and search-readiness evidence as available.

37/100

SEO HEALTH SCORE

Critical Issues Found:

1. **Info:** Server response time of 3 to 7 seconds on every page; lab LCP 5.0 s on the mobile homepage. Cache-Control max-age=0 plus WooCommerce session and __cvg_1p_uid cookies on anonymous requests defeat page caching.
2. **Info:** No Product, Offer, AggregateRating or Review schema on any product page, so Merchant listings and star ratings are unreachable despite a 4.5-star Trustpilot rating shown on page.
3. **Info:** Every unknown URL 301-redirects to the homepage; 26 legacy product URLs linked 287 times from 114 pages and the privacy policy URL all land on the homepage.
4. **Info:** No hreflang on 208 pages; /de/, /en/ and /nl redirect to the Dutch homepage; 60 of 96 German URLs resolve to Dutch pages; /en/shop/ declares en-US but serves Dutch.
5. **Info:** Index bloat: 9 homepage test clones, 14 German -kopie product clones, 7 kerstcadeau landing variants, duplicated posts, 22 thin ?reviews=/?store= pages; 46 of 120 sitemap URLs are junk and the author sitemap has an invalid <loc>#</loc>.

Quick Wins:

1. Enable full-page caching with the WooCommerce session cookie excluded from the cache key outside cart/checkout; fix Cache-Control and Expires headers.
2. Switch on WooCommerce/Yoast Product structured data and add AggregateRating from Trustpilot (JSON-LD provided in findings/schema.md).
3. Restore /privacybeleid/ and retarget the 26 legacy URLs to their real products, then fix the 287 internal links.
4. Trash or 301 the test pages, German clones and kerstcadeau variants; noindex ?reviews=/?store= and geen-categorie; disable the author sitemap.
5. Add H1s and meta descriptions to /shop/, the product pages, /flavory-gameplay/, /wijnkiezer/, the B2B page and /proeverij/; add 'wijnbox' and 'wijnproeverij thuis' to titles.

2. Audit Categories

2.1 Technical SEO

Score: **34/100**

What Works

- Server-rendered HTML, no JavaScript rendering dependency
- www and http correctly 301 to https://flavory.wine
- Valid robots.txt and valid sitemap index with 8 child sitemaps
- Viewport meta present on all pages; cart pages noindexed

Findings

Catch-all 301 to homepage instead of 404 (soft-404 pattern) **Critical**

Any unknown path returns 301 to https://flavory.wine/. 26 legacy product/landing URLs still linked 287 times from 114 pages land on the homepage; /privacybeleid/ is swallowed too.

Recommendation: Serve real 404s with a helpful template; retarget each legacy URL to its live product (map in findings/ecommerce.md); update internal links.

No hreflang and broken language roots **Critical**

0 of 208 pages carry hreflang. /de/, /en/, /nl 301 to the Dutch homepage; the German home is /de/start/. 60 of 96 German URLs resolve to Dutch pages via redirect or canonical. /en/shop/ and /en/blog/ declare en-US but serve Dutch.

Recommendation: Point /de/ to /de/start/; add hreflang nl/de/x-default only for translated pairs; noindex or remove the /en/ pages unless an English site is planned.

Index bloat: about 40% of crawled URLs should not be indexable **High**

9 builder test pages duplicating the homepage, 14 German -kopie/-copy product clones (99.4% identical), 7 kerstcadeau landing variants, duplicated blog posts, 22 thin ?reviews=?store= pages, indexable geen-categorie archive. 46 of 120 sitemap URLs affected.

Recommendation: Trash or 301 duplicates, noindex CPT parameter pages and uncategorised archives, exclude them from the sitemap.

No security headers **High**

HSTS, CSP, X-Frame-Options, X-Content-Type-Options and Referrer-Policy are all absent.

Recommendation: Add the headers in the nginx server block; start CSP in report-only mode.

Page caching defeated by cookies and headers **High**

Cache-Control: max-age=0, Expires now, wp_woocommerce_session and __cvg_1p_uid cookies set on first anonymous request. TTFB 3.4 to 3.9 s with curl.

Recommendation: Full-page cache with cookie exclusions limited to cart/checkout/account; set proper cache headers.

Heavy HTML and flat internal linking **Medium**

Average HTML 314 KB (max 503 KB), 27 to 35 stylesheets and 28 to 32 blocking scripts per page; every blog post links to every other post and to the cart page; 14 sitemap URLs have no inbound links.

Recommendation: Remove unused builder CSS/JS; replace the all-posts related block with curated cluster links.

2.2 Content Quality

Score: **38/100**

What Works

- Product pages carry 1,000+ words of unique copy; top blog posts exceed 2,000 words
- Conversational, readable Dutch; Article + Person schema on posts
- Blog post on blind wine tasting already ranks and matches the SERP page type

Findings

Privacy policy unreachable **Critical**

/privacybeleid/ 301s to the homepage while checkout still references it.

Recommendation: Restore the page immediately.

Duplicate and near-duplicate content **High**

9 homepage clones, 14 German product clones, 7 kerstcadeau variants (two are 60-word stubs), a -dupliceren post, two republished post pairs, 3 DE and 2 NL Valentine horoscope variants; 30 pages reuse the homepage meta description.

Recommendation: Consolidate to one URL per topic/occasion with 301s; unique descriptions.

Weak E-E-A-T signals **High**

Person.url is '#' on 56 posts, no author bio; Organization schema has only an Instagram link; address, VAT, Trustpilot and LinkedIn not linked; trust claims not marked up.

Recommendation: Author page for Bart, enriched Organization schema, on-page reviews with Review schema.

Thin commercial pages **High**

B2B page /eindejaars-en-relatiegeschenken/ is 183 words behind a form despite 151 inbound links; 50 pages under 300 words; category archives are template boilerplate.

Recommendation: Add tier pricing, contents, process and trust signals to the B2B page; write category intros.

Vocabulary mismatch with search demand **High**

Site uses 'wijnspel' and 'het ultieme duel'; buyers search 'wijnproeverij thuis', 'wijnbox cadeau', 'relatiegeschenk wijn', 'teambuilding wijnproeverij'. Flavoury absent from 6 of 8 target SERPs; 'wijnbox' appears in no title.

Recommendation: Rewrite titles/H1s per findings/sxo.md; publish gift-guide and beginner content.

No hub-and-spoke architecture **Medium**

No pillar pages; blog posts link to legacy product URLs that redirect to the homepage while live products receive zero blog links.

Recommendation: Six pillars and a 40-row link matrix in findings/cluster.md.

2.3 On-Page SEO

Score: 33/100

What Works

- No page is missing a title tag
- Breadcrumbs present sitewide

Findings

86 pages without H1, 41 with multiple H1 **High**

Includes /shop/, both product pages, /shop/bubbelbox/, /flavoury-gameplay/, /wijnkiezer/.

Recommendation: Add a single H1 to the product and shop templates.

71 pages without meta description; 30 copy the homepage description High

Includes the B2B page (blank) and /proeverij/ (copied).

Recommendation: Unique, intent-matching descriptions starting with commercial pages.

Titles carry no search intent High

Homepage title is 'Home - Flavory'; product titles use 'Het ultieme duel'; 'wijnbox' and 'wijnproeverij thuis' absent from titles.

Recommendation: Rewrites in findings/sxo.md.

287 internal links point to redirecting legacy URLs High

From 114 pages, mostly blog related blocks and buttons.

Recommendation: Repoint to live product URLs.

1,019 of 5,207 images lack alt text Medium

About 40% on product images.

Recommendation: Descriptive alt text with product name and grape pairing.

2.4 Schema / Structured Data

Score: 42/100

What Works

- Valid Yoast graph on all pages: WebSite, Organization, BreadcrumbList, WebPage, ImageObject
- Article + Person on 56 posts; FAQPage on 7 pages with matching visible content

Findings

No Product/Offer/AggregateRating/Review schema Critical

25 ItemPage URLs have no Product markup; Elementor rating widget emits an orphan Rating node; GTIN buried in SKU string.

Recommendation: Enable WooCommerce/Yoast product schema; JSON-LD in findings/schema.md; add gtin13.

Organization entity incomplete High

Name, logo and Instagram only; no address, VAT, contactPoint, founder, LinkedIn or Trustpilot sameAs.

Recommendation: Enrich the sitewide Organization node.

No LocalBusiness or Review schema on partner-store and customer-review pages Medium

10 ?store= and 12 ?reviews= pages carry only WebPage.

Recommendation: Add LocalBusiness and Review types if the pages are kept.

Person.url set to '#' Medium

56 author nodes.

Recommendation: Set a real author URL in Yoast.

Inconsistent Article vs BlogPosting Low

54 Article, 2 BlogPosting.

Recommendation: Standardise on one type.

2.5 Performance

Score: **28/100**

What Works

- CLS is 0.000 to 0.002 on every page tested
- Hero image has fetchpriority=high, eager loading and explicit dimensions

Findings

Server response 2.9 to 7.3 s on every page Critical

TTFB is 4 to 9 times the 800 ms budget and accounts for almost all of LCP; caching bypassed by cookies and headers.

Recommendation: Page cache with cookie exclusions, correct headers, OPcache, object cache, CDN.

Render-blocking builder CSS/JS **High**

27 to 35 stylesheets and 28 to 32 blocking scripts per page on 314 KB HTML.

Recommendation: Remove unused builder assets, defer non-critical JS, inline critical CSS.

Third-party tag overload **High**

GTM, Meta Pixel, GA4, Microsoft Clarity and an A/B-test tool; 433 to 683 ms blocking time under 4x CPU throttle.

Recommendation: Delay non-essential tags until interaction; consolidate through GTM.

Heavy page weight and inconsistent lazy loading **Medium**

Homepage and blog transfer 9.4 to 9.7 MB cold; /shop/ lazy-loads 0 of 20 images.

Recommendation: Lazy-load below-fold images, compress media, audit videos.

INP not measured **Info**

No synthetic interaction fired; TBT used as proxy.

Recommendation: Re-measure with field data once GSC/CrUX is connected.

2.6 AI Search Readiness

Score: **51/100**

What Works

- All AI crawlers allowed (appropriate for commerce)
- llms.txt exists; site is server-rendered; max-snippet unrestricted

Findings

Homepage definition invisible to main-content extraction **Critical**

Extracted main text is 503 characters of blog teasers; 'Wat is Flavoury', 'Hoe werkt het' and price are not captured.

Recommendation: Add a 2-sentence definition block near the top of homepage, product pages and FAQ (Dutch examples in findings/geo.md).

No Product schema for AI shopping surfaces **High**

No structured price or availability to cite.

Recommendation: Same fix as schema finding 1.

Weak entity signals **High**

No Wikidata entry; Organization schema minimal; Trustpilot and LinkedIn not linked; brand-name collision risk.

Recommendation: Enrich Organization schema, consistent brand description, consider Wikidata.

German section inconsistently localised **High**

Untranslated German URLs redirect to Dutch; no hreflang.

Recommendation: Translate or remove from German navigation.

llms.txt is auto-generated junk **Medium**

Lists test pages and untitled entries; no llms-full.txt. Google ignores llms.txt.

Recommendation: Curate it; low priority.

2.7 Images

Score: **45/100**

What Works

- WebP used for hero and OG images
- LCP image correctly prioritised

Findings

1,019 images without alt text **Medium**

20% of 5,207 image tags; about 40% on product images.

Recommendation: Add descriptive alt text, product galleries first.

139 images without width/height **Low**

Potential layout shift if lazy-loaded later.

Recommendation: Add dimensions in the template.

Inconsistent lazy loading and heavy media **Medium**

/shop/ lazy-loads 0 of 20 images; homepage cold load 9.4 MB.

Recommendation: loading=lazy below the fold; compress and resize media.

2.8 Sitemap

Score: **42/100**

What Works

- 8 valid child sitemaps, correct XML, declared in robots.txt

Findings

46 of 120 sitemap URLs are junk **High**

Test pages, German clones, kerstcadeau variants, ?reviews=?store= query URLs, geen-categorie; /de/shop-2/ listed twice; invalid <loc>#</loc> in author-sitemap.xml.

Recommendation: Yoast: disable author sitemap, exclude Reviews/Store CPTs, trash test pages; target about 76 URLs.

2.9 Visual / Mobile UX

Score: **63/100**

What Works

- Homepage above the fold on mobile shows H1, rating and CTA; no visible layout shift

Findings

Announcement bar messages overlap on mobile **High**

Carousel transition renders two texts at once (blogpost_mobile.png).

Recommendation: Crossfade with aria-hidden on the inactive slide.

Add-to-cart below the fold on mobile product pages **High**

Requires a full scroll past the gallery (product_mobile_full.png).

Recommendation: Sticky mobile add-to-cart bar.

Oversized mobile header Medium

Logo and header take about 30% of the first viewport.

Recommendation: Drop tagline and shrink logo on small screens.

/de/start/ never reaches network idle Medium

Three Playwright captures timed out at 45 s.

Recommendation: Find the hanging request or script on the German template.

No cookie-consent banner observed Medium

GTM, Meta Pixel and Clarity load without a visible consent prompt in 19 captures.

Recommendation: Verify consent mode for BE/NL visitors.

2.10 E-commerce

Score: **34/100**

What Works

- Server-rendered price and add-to-cart; unique product copy; cart noindexed; add-to-cart parameters blocked

Findings

German shop is 74% duplicate Critical

14 of 19 DE product URLs are -kopie/-copy clones, indexable and in the sitemap.

Recommendation: 301 to originals, remove from sitemap, fix internal links.

Legacy product URLs redirect to homepage High

26 URLs, 287 internal links.

Recommendation: Redirect map in findings/ecommerce.md.

Seasonal pages fragmented **High**

7 kerstcadeau pages plus 3 posts; Valentine variants in NL and DE; Valentine product slug still carries -10-korting.

Recommendation: One evergreen URL per occasion per locale.

Merchant Center not possible **High**

No Product schema, GTIN field, shipping or returns markup.

Recommendation: Product schema with gtin13, shippingDetails and MerchantReturnPolicy; feed via WooCommerce.

B2B page hides pricing **High**

183 words, quote form only, no meta description, title 'Offerte aanvraag - Flavory'.

Recommendation: Show tier pricing, MOQ, personalisation, client logos.

2.11 Backlinks

Findings

Insufficient data; thin profile signal **Medium**

Absent from the Common Crawl web graph while comparable Belgian retailers appear; none of 4 checked partner stores link to flavory.wine; Moz/Bing not configured.

Recommendation: Stockist links, Belgian gift guides, team-building directories, press, bloggers; add a Moz key for monitoring.

3. Action Plan

Phase 1: Critical Fixes Week 1

- Enable full-page caching with WooCommerce session cookie excluded outside cart/checkout; fix Cache-Control/Expires; verify OPcache and PHP 8.x
- Enable Product/Offer/AggregateRating schema (WooCommerce core or Yoast WooCommerce SEO); add gtin13 05430004293071
- Restore /privacybeleid/
- Replace catch-all 301-to-homepage with real 404s
- Retarget 26 legacy URLs to live products and fix 287 internal links
- Trash or 301 the 9 test pages, 14 German clones, -dupliceren post and 6 kerstcadeau variants
- Make /de/ serve or redirect to /de/start/; noindex or remove /en/ pages

Phase 2: High-Impact Improvements Weeks 2-3

- Add hreflang nl/de/x-default for translated pairs
- Yoast sitemap hygiene: disable author sitemap, exclude Reviews/Store CPTs, noindex geen-categorie (target ~76 URLs)
- Rewrite titles, meta descriptions and H1s for homepage, product pages, B2B page and /proeverij/ using 'wijnproeverij thuis', 'wijnbox', 'relatiegeschenk wijn', 'teambuilding wijnproeverij'
- Add H1s to product/shop templates; write the 71 missing meta descriptions
- Add HSTS, X-Content-Type-Options, X-Frame-Options, Referrer-Policy, report-only CSP in nginx
- Defer third-party tags, lazy-load below-fold images, add dimensions and alt text
- Fix announcement-bar overlap, sticky mobile add-to-cart, smaller mobile header, debug /de/start/ hang
- Enrich Organization schema (address, VAT, contactPoint, founder, LinkedIn, Trustpilot); fix Person.url; author page

Phase 3: Content & Authority Month 2

- Build 6 pillar pages and re-slot 28 posts as spokes; curated related links (matrix in findings/cluster.md)
- Merge duplicate post pairs and seasonal variants; one evergreen URL per occasion per locale; rename Valentine product slug
- Publish gift-guide listicle and beginner guide; add 2-sentence definition blocks for AI citability
- Pull Trustpilot reviews on-page with Review schema; LocalBusiness schema and outbound links on partner pages
- Link building: stockists, Belgian gift guides, team-building directories, bloggers, press, Unizo
- Finish or prune the German section so no German URL redirects to Dutch

- Curate llms.txt

Phase 4: Monitoring & Iteration Ongoing

- Connect GSC, GA4 and a PageSpeed API key for field data
- Capture a drift baseline after Phase 1; re-run monthly
- Re-measure LCP/TTFB after caching; target LCP under 2.5 s mobile
- Track rankings for wijnproeverij thuis, wijnspeel, wijnbox cadeau, blind wijn proeven, relatiegeschenk wijn, teambuilding wijnproeverij, origineel cadeau wijnliefhebber
- Bing Webmaster Tools + IndexNow; Moz or Ahrefs key for backlinks

Data Sources & Methodology

Source	Description	Update Frequency
PageSpeed Insights API	Lighthouse lab audit (mobile emulation, Moto G Power, slow 4G)	Real-time
Chrome UX Report (CrUX)	28-day rolling field data from real Chrome users	Daily ~04:00 UTC
CrUX History API	25-week p75 trend data per metric	Weekly
Google Search Console	Search Analytics (clicks, impressions, CTR, position)	2-3 day lag
URL Inspection API	Per-URL index status, coverage state, crawl info	Real-time (2,000/day)

Report generated by Claude SEO — Google SEO Intelligence Skill — September 16, 2026
Methodology based on Google Web Vitals thresholds, Search Console documentation, and Lighthouse scoring algorithms.
